

About *ClinicalTrials.gov*

- Clinical Trials = research studies in which new treatments are tested in patients to see if they are safe and effective.
- Provides easy access to information on clinical trials for a wide range of serious or life-threatening diseases and conditions.
- Language used in the text is intended to be suitable for the general public.
- Developed by the U.S. National Institutes of Health (NIH), through its National Library of Medicine (NLM), in collaboration with NIH Institutes and the Food and Drug Administration (FDA).
- Contains over 7,000 clinical studies sponsored by NIH, other Federal agencies and the pharmaceutical industry.
- Available at clinicaltrials.gov
- Alternatively click on the *ClinicalTrials.gov* image on NLM's home page.

Menu bar

- Appears directly below the logo on all pages.
- Facilitates navigation.
- Click on **Home** to return to the home page of *ClinicalTrials.gov*.
- **Search** returns to a cleared out search query box.
- Use **Browse** to reach the Browse option page (discussed later in this workbook).
- Use **Resources** to learn more about clinical trials. This page also provides links to other consumer health-oriented resources.
- Click on **Help** to get detailed search information.
- Click on **What's New** to see a variety of information: the FDA guidance document, Frequently Asked Questions, linking information, and other timely information.
- Click on **About** to read an overview of *ClinicalTrials.gov*.

Results (cont'd)

- The results of your search will be displayed in a brief list format in a ranked order based on your search criteria.
- The current status of the trial (e.g., recruiting), title, and conditions being studied (e.g., rheumatoid arthritis; diabetes; breast cancer) are shown for each clinical trial.
- The display default is for “recruiting” and “not yet recruiting” trials. To see *all* trials (including trials no longer recruiting), click on the box next to “Show all trials...”
- If you want to see the details of a trial use the title link.
- If you want to see the details of multiple trials, you can select the ones you like (checkbox) and then use the Display Selected Studies button.

Curcumin for the Prevention of Colon Cancer

This study is currently recruiting patients.

Sponsored by

[National Cancer Institute \(NCI\)](#)

University of Michigan Comprehensive Cancer Center

Purpose

RATIONALE: Chemoprevention therapy is the use of certain drugs to try to prevent the development of cancer. Curcumin may be effective in preventing the development of colon cancer.

PURPOSE: Phase I trial to determine the dose amount of curcumin that can be tolerated to help in preventing colon cancer in healthy men and women.

Condition	Treatment or Intervention	Phase
prevention of colorectal cancer colon cancer	Drug: chemoprevention of cancer Procedure: cancer prevention intervention Drug: curcumin	Phase I

[MEDLINEplus](#) related topics: [Colorectal Cancer](#)

Study Type: Prevention

Official Title: Phase I Study of Curcumin for the Chemoprevention of Colon Cancer

Record continues on the next page.

Further Study Details:

OBJECTIVES: I. Determine the maximum tolerated dose (MTD) of curcumin as a chemopreventive agent of colon cancer in healthy subjects.

II. Determine if tolerable doses of this agent in uniformly milled formulation capsules are bioavailable in these subjects.

III. Determine the pharmacokinetics of this agent and two metabolites at the MTD and next lower escalated dose in these subjects.

PROTOCOL OUTLINE: This is a dose escalation study followed by a pharmacokinetic study.

Patients receive a single oral dose of curcumin followed by a standard fatty meal.

Cohorts of 3-6 patients receive escalating doses of curcumin until the maximum tolerated dose (MTD) is determined. The MTD is defined as the dose at which 2 of 6 patients experience dose limiting toxicities. Once the MTD is determined, additional patients are accrued to receive curcumin in the pharmacokinetic phase of the study.

Patients are followed at 24, 36, 48, and 72 hours.

PROJECTED ACCRUAL: A total of 3-24 patients will be accrued for the dose escalation phase and then 12 additional patients will be accrued for the pharmacokinetic phase of this study within 3 months.

 **Eligibility**

Ages Eligible for Study: 18 Years and above

Criteria**PROTOCOL ENTRY CRITERIA:**

--Disease Characteristics--

Healthy men and women age 18 and over

--Prior/Concurrent Therapy--

Biologic therapy: Not specified

Chemotherapy: Not specified

Endocrine therapy: At least 14 days since prior steroids

This is a partial screen capture of the **Eligibility criteria**.
